

Competitive Learning Contest to Raise State Test Scores for the 7th Consecutive Year

Massachusetts schools using the JogNog digital learning system raised state science test scores

Press release: Wakefield, MA, June 1, 2018

G7 Research, the makers of the JogNog digital learning platform, has recently reported that schools have now completed its JogNog Tower Challenge for this year. This is the 7th year in a row that JogNog has held the JogNog tower challenge.

The goal of state testing is to identify and help students that do not possess the basic knowledge required for their grade level. The goal for schools and teachers is to identify strategies to challenge these students to move from ‘below the bar’ to ‘above the bar’. One of the best ways to do this is to make sure that students don’t forget what they have already learned. The JogNog Tower Challenge is a team-based competitive learning contest that provides students with a fun and exciting way to review and remember what they have learned in class and apply it to state tests.

Massachusetts is ranked as one of the top states for student competence on Science, Technology and Engineering (STE) topics. Each year, schools in Massachusetts typically set a goal to move 1-3% of their students from the “Warning” or “Needs Improvement” category into the “Proficient” category for state MCAS tests – effectively seeking to move students from ‘below the bar’ to ‘above the bar’. It is rare that schools achieve these goals despite a multitude of efforts, including changes in curriculum, teachers, and teaching methods. Remarkably, schools that have participated in the JogNog Tower Challenge have moved an average of 2.9% additional students into the Proficient category. A result that is more than five times more effective than any strategy previously employed at these schools.

The JogNog Tower Challenge runs from September to May each school year. Schools that join the JogNog Tower Challenge have access to nearly 80,000 review questions that map to the curriculum standards that teachers have covered in class. JogNog can also be used for summative and formative assessment.

The JogNog Tower Challenge uniquely motivates students to work together to learn and correctly answer as many questions as they can by providing a team-based learning environment with leaderboards, mastery levels and badges for accomplishment.

Steve Smith, CEO and co-founder of JogNog, commented on the success of the program: “We are committed to continue to run the JogNog Tower Challenge every year. Going into our 8th consecutive year we expect it to continue to have large positive impact for the schools that participate.”

About JogNog

JogNog is an easy way for teachers to review the standards and topics that their students need to know for their state assessments. When used regularly, JogNog has been shown to have significant positive impact on state test scores. JogNog is available on the web for Google Classroom and Microsoft Office 365 and Microsoft Teams users. For more information about JogNog, visit www.JogNog.com.
